Abstract

The abstract is a mandatory element that should summarize the contents of the paper. It should be confined within a single paragraph.

Keywords: We would like to encourage you to list your keywords here. They should be separated by semicolons and the last is followed by a full stop.

1. Major Guidelines for the Camera-Ready Version

The camera-ready version of your ISIPTA '17 paper should be submitted on the ISIPTA '17 Easychair page by May 2nd, 2017. Some major guidelines are reported here below.

- Limit your text, bibliography and appendices included, to **12 pages**.

- Following the PMLR naming conventions, assign to your paper the following (lowercase) ID: surname of first author followed by two-digit year of publication and an iterative letter code if multiple papers have the same first author. E.g., the ID of the paper by Alessandro Antonucci should be `antonucci17` or `antonucci17a`.

- Your paper should be typeset using LaTeX. Put all the files required for the compilation (sources, images, etc.) in a folder. Use the ID for the folder name and for the main LaTeX file (e.g., `antonucci17.tex`). Compress the folder in a zip or tarball archive before uploading it on Easychair.

- The very preamble of your `.tex` file should be:

```
\documentclass[twoside,11pt]{article}
\usepackage{isipta}
```

- You can find the `isipta.sty` file in the author's kit. Alternatively, get it here. This style file includes the `amssymb`, `natbib` and `graphicx` packages, and defines many common macros, such as `proof` and `example`. Do not include the package `theorem`. If possible,

First name	Last Name	Grade
John	Doe	7.5
Richard	Miles	2

Table 1: A (useless) table.

stick to standard LATEXpackages. Define your own commands (e.g., \eg for "e.g.") in the main .tex file. Don't use additional .sty files.

- For images use PDF or PNG files, included with \includegraphics{imagefile}. Avoid EPS images, the epsfig package, and the \graphicspath command.

- References should be managed using BIBTEX. The bibliographystle is already specified in the style file. Use the standard \cite and \citep for citations. E.g., we can cite a paper like this (Einstein, 1905), or we can say that Goossens et al. (1993) wrote a nice book.

- Please download the copyright form. Print, fill, and sign the form. The name of the PDF scan should be the ID with the suffice "Permission" (e.g., antonucci17Permission.pdf). This file should be included in the folder with the sources to be uploaded on Easychair.

2. Other Guidelines

- The title of the paper and of the sections should capitalize on the first letter of each word, except for articles, conjunctions, and prepositions. If possible, try to avoid \subsubsections.

- Ensure that below each figure and table there is a caption (e.g., see Table 1).

- Acknowledgements should go at the end, before appendices and references.

- For UTF8 encoding (e.g., to quickly write *astéroïde* in your paper), add to the preamble:

```
\usepackage[utf8]{inputenc}
\inputencoding{utf8}
```

- Please do not change the size of the fonts, the line spacing, and the margins.

Appendix A. Proofs

In this appendix we present a random filler.
